

Course Objectives

Theory and Practice = Comprehension

Theory

- Core concepts: DAG, Executor, Workflow, Task and Task Instances, etc.
- Advanced concepts: SubDAGs, XCom, Branching, etc.
- Important questions
 - Which Executor to use and when ?
 - How can I scale out Airflow?
 - Which backend database do I need?
 - And more...
- How to create plugins to customize Airflow according to my needs.

Practice!

- At the end of each section, you will have a quiz to assess your comprehension of the course and review some points that you could have misunderstood.
- I tried to have for each theory lesson, a practical example where you will just have to follow what I'm doing on my screen.
