# Quick Tour of Airflow CLI

Let's discover the CLI

# Initialize the Metastore DB

`airflow initdb`

# Start the Web Server

```
airflow webserver --port 8080
```

# Start the Scheduler

`airflow scheduler`

# Start a Worker Node

If you are in distributed mode (Celery)

airflow worker

# Print the List of Active DAGs

`airflow list_dags`

# Print the List of Tasks of the dag_id

airflow list_tasks dag_id

Exemple:

    airflow list_tasks hello_world

# Print the Hierarchy of Tasks in the dag_id

```
airflow list_tasks dag_id --tree
```

```
Exemple:
```

```
    airflow list_tasks hello_world --tree
```

# Test your Tasks in your DAG

```
airflow test dag_id task_id execution_date
```

```
Exemple:

    airflow test hello_world hello_task 2018-10-05
```
